

## **PROTECT YOUR NITROGEN INVESTMENT AND BOOST YOUR BUSHELS**

Harvest is getting into full swing, which means soon growers will start preparing for the 2020 growing season. As growers know, a balanced fertility program is vital to produce a sustainable and profitable crop.

## **Crop Insurance Minute**

Jim Ward, Director of Risk Management

### **Additional Prevent Plant Payment Coming Soon**

The Disaster Relief Act allows the Federal Crop Insurance Corporation to provide additional assistance to insureds who were prevented from planting eligible 2019 crop year crops in the 2019 calendar year due to certain causes of loss such as excess precipitation, flood, storm surge, tornado, volcanic activity, tropical depressions, hurricanes and cyclones. Such farmers may be eligible to receive a prevented planting supplemental disaster payment using the below factors of the prevented planting indemnity:

- 15% for producers with Revenue Protection, except those who selected the Harvest Price Exclusion option.
- 10% for producers who have any plan other than Revenue Protection.

Payments should start going out mid-October to all those who previously qualified for a prevent plant payment.
