Tips for Fall Anhydrous Application

We are starting to reach the point in the season where the combines are starting to slow down, and for some growers, they are starting to begin preparing for the next crop year by making their fall fertilizer applications.

While fall nitrogen applications might not make the most sense for all regions, if you do apply nitrogen in the fall, it is important to make sure that you are protecting your investment by reducing the risk of nitrogen loss.

Safety Brief: Handling Anhydrous Ammonia

Harvest 2019 is coming to an end and our customers and employees have started applying anhydrous ammonia for the 2020 growing season. Anhydrous Ammonia is the most commonly used source of nitrogen for corn growers in our trade territory and because of that, we think it is important to share some tips for safety when working with this product.
