

# 2025 FUNGICIDE OFFER

Crop nutrition is key to fungicide response, especially potassium nutrition! If potassium nutrition is low due to soil test levels or drought, the plant protection benefits of a foliar fungicide decrease. For growers looking to control disease AND enhance yield this season, Agtegra is recommending a fungicide and slow release N micro-pak application. **Book by May 22, 2025 to receive maximum rebates on every acre you apply, plus free MZB Analytics! No prepay required.**

Fungicide	+ Slow Release N Micro-Pak	+ Adjuvant	=	May 22 booking deadline	June 22 booking deadline	July 22 booking deadline
<b>Delaro® 325 SC</b> 8 oz/ac	<b>ARx N-fuZe™</b> 1 gal/ac	<b>MasterLock®</b> 4 oz/ac		<b>\$6/ac</b> \$23.50/ac after rebate	<b>\$5/ac</b> \$24.50/ac after rebate	<b>\$4/ac</b> \$25.50/ac after rebate
<b>PLUS FREE MZB ANALYTICS!</b>						
<b>Delaro® 325 SC</b> 8 oz/ac	<b>ARx N-sorB™</b> 1 gal/ac	<b>MasterLock®</b> 4 oz/ac		<b>\$6/ac</b> \$21.50/ac after rebate	<b>\$5/ac</b> \$22.50/ac after rebate	<b>\$4/ac</b> \$23.50/ac after rebate

You may also add an insecticide to your tank mix, if needed. Ground or aerial application qualifies. Application costs not included. Rebate applied as credit on account after spraying season. Receive free MZB Analytics only on acres applied with fungicide offer.

## 2024 FUNGICIDE TRIAL RESULTS

Both corn and soybean crops responded well to foliar fungicide applications in our 2024 Bath Research & Technology Plot trials.

**Delaro® 325 SC** has a broad-spectrum of disease control and a best-in-class dual mode of action residual.

**ARx N-fuZe™** is formulated specifically for Agtegra farmers with potassium and slow release forms of nitrogen to aid crop safety, help nutrient efficiency, promote low volatility, and improve handling properties. It also contains zinc, copper, manganese and boron.

**ARx N-sorB™** is also formulated specifically for Agtegra farmers with both urea and urea-triazole (slow release) forms of nitrogen so it remains on the leaf surface longer, releasing nitrogen and boron slowly with lower burn potential and improved absorption.
