

A superior fungicide

Trivapro® fungicide is the hardest-working, longest-lasting fungicide for corn. With three proven active ingredients – Solatenol® fungicide, azoxystrobin and propiconazole – Trivapro delivers long-lasting, preventive and curative disease control and provides crop enhancement benefits late into the season.

Trivapro crop enhancement benefits

Trivapro also provides crop enhancement benefits to help produce higher yields:

- Improved water use efficiency that slows water loss during dry conditions
- Quicker canopy closure to deprive weeds of sunlight
- Stronger stalks to reduce lodging
- Prolonged grain-fill period by preventing crops from dying down early due to disease or environmental stressors

In 2016, Trivapro increased corn yield an average of **27** bushels per acre¹

Diseases controlled:

- Gray leaf spot
- Northern corn leaf blight and leaf spot
- Common rust and Southern rust
- Yellow leaf blight
- Eye spot
- Anthracnose leaf blight
- Anthracnose stalk rot
- Physoderma brown spot
- Tar spot

Experience longer-lasting disease control with Trivapro

Trivapro extends residual control of key diseases, stopping the plant from dying early and sacrificing green tissue. By protecting the green leaf tissue of the plant, Trivapro enables plants to continue photosynthesizing longer, allowing the crop to maximize grain-fill and yield.

62 days after application

Application timing: R1. Trivapro produced 60 bu/A more than untreated. Additional revenue: \$210 per acre². Location: Kentucky, 2016

Trivapro provided approximately 42 days of residual disease control. Headline AMP provided approximately 24 days of residual control. Source: Innovative Ag Services Field Trial – Maynard, IA (2016)

¹ Based on 48 non-replicated trials in the U.S. in 2016.
² Revenue calculations based on commodity prices of \$3.50/bu corn.
