

Want to take some guesswork out of your New Crop Grain Marketing?

Consider our new marketing tool, the Average Price Contract for New Crop 2023 production.

This new marketing option aims to price your enrolled bushels across multiple market events, namely Feb Insurance Price setting (corn vs soybeans), Spring Planting (Mar-May), and Crop Progress into early Pollination (May-June). Your enrolled bushels will be divided equally across the period, with that portion pricing each day the market is open. At the end of the program, you will have a net average of all periods as your futures price on the contract.

- Program Period runs Feb 1st, 2023 through June 30th, 2023
- Approximately 104 trading sessions
- Corn & Milo will reference Chicago December 2023 Corn Futures (CZ23)
- Soybeans will reference Chicago November 2023 Soybean Futures (SX23)
- Cost is \$0.05/bushel
- Volume must be in 5,000 bushel increments
- No Knockout or Double-Up Risk like other OTC Derivatives
- Signup/Enrollment Deadline is January 31st, 2023

Upon commitment, a NPE (No Price Established) contract will be created by Alliance Ag. Upon completion of the pricing period, the net average futures price will be updated to the reference contract. Basis can be set at any time between initial NPE Contract creation and final harvest delivery. Settlement options post-delivery still include cash & deferred, as with standard forward contracts. Standard AAG Delivery Quality & Non-Delivery Terms apply, as referenced in the official contract to be generated.

If you have any questions about the program, or if you'd just like to chat about how this could be a fit for your operation, give us a call in the Spearville office today!
