  - 31 Spotted Cutworm

# Corn

With the storms we had this past week your corn may experience some storm damage.

Pushed over corn is caused by wind.

# Soybeans

Reminder to spray your soybean before they reach their R stages for weeds.

# Potatoes

Early planted potatoes are now reaching the blooming stage. If you notice early blooming, be mindful of the insecticides you're applying to ensure they are safe for use during this growth phase.

# Colorado Potato Beetle Status

After the hot weather last weekend, we have seen an explosion in the larva and have been finding 3<sup>rd</sup> instar larva

# Potatoes

With the recent weather, it is important to be applying fungicides to help delay early blight and prevent late blight.

# Carrots

When your carrots have reach 25% canopy is time to start your fungicide program.

# Cabbage

Seed planted cabbage is catching up to transplanted cabbage!

Seed Planted Cabbage

Transplanted Cabbage
