

# Customer Spring Safety Tips

## Anhydrous Ammonia

1. Always wear Anhydrous Ammonia approved Safety Gloves and Goggles.
2. **Never** wear contact lens when working with or transporting Anhydrous Ammonia.
3. Always close the liquid valve on the ammonia nurse tank when you are on public roadways.
4. Be sure hitch pins and clips are in place and in good condition.
5. Make sure safety chains are used on the road and in the field.
6. **Always wear gloves and goggles.**
7. **Never wear contact lens.**
8. Don't leave tanks in the field over night or for longer periods of time.
9. Park tanks out of sight of roads or park them back in the field away from field driveways.
10. Steps 8&9 will help prevent drug related thefts and spills resulting from valves left open by thieves.
11. Take the extra time to be sure you have safety water with you at all times. If you need this water you will be thankful you made the extra effort.
12. Always open valves slowly, check for leaks, or ruptured hoses.
13. Take care of our equipment. It helps keep our costs down which helps keep your costs down.
14. Check your hose for expiration dates. Replace as needed.
15. Be safe on the road. Towing nurse tanks presents additional hazards; an accident involving ammonia could result in tremendous liability, serious injury. BE CAREFUL.
