AAFCO

Hi-Point ZERO 22-12 Dog Food is formulated to meet the nutritional levels established by the AAFCO Dog Food Nutrient Profiles for All Life stages, including for growth of large size dogs (70 lb. or more as an adult).

PUPPY

Puppies generally start to nibble solid foods at three to four weeks of age. Keep moistened Hi-Point ZERO 22-12 Dog Food available to those puppies at all times. After weaning, at six to eight weeks of age, puppies will normally eat dry or moistened food at will. If water is added, use no more than one part warm (not hot) liquid to three parts Hi-Point ZERO 22-12 Dog Food, changing frequently to ensure freshness. If fed dry, food can be kept before the puppies at all times. After one year of age, follow the adult feeding instructions.

REPRODUCTION

Hi-Point ZERO 22-12 Dog Food provides the extra nutrition needed by reproducing females in stages of gestation and lactation. Food consumption may vary during gestation, so feed the amount needed to maintain the pregnant female's good body condition. Food intake may double or even quadruple during lactation.

EASY TO FEED

No need to add anything for taste or nutrition. Can be served moistened or dry. If water is added, use no more than one part liquid to three parts Hi-Point ZERO 22-12 Dog Food.

TRANSITIONING TO HI-POINT ZERO 22-12 DOG FOOD

Changes in your dogs feeding habits should be made gradually. When changing, first substitute small amounts in place of your dog's current food. Then over the next week to 10 days, increase the amount of parts Hi-Point ZERO 22-12 Dog Food, while decreasing amounts of your dog's other food.

HEALTHFUL HINTS

Water is essential to your dog's body function. Provide fresh, clean water in a clean container at all times. If your dog refuses water, try moistening his dog food before serving. For your pet's health, see your veterinarian regularly.
