

# Purina® High Octane® Fly Control Supplement with ClariFly®

WITH

**ClariFly** LARVICIDE

**Effective fly control for cattle, sheep, goats and pigs**

**Making your barn more comfortable for you and your animals.**

## Stop Flies Before They Start

Feed-through technology passes through the digestive system and into the manure preventing flies from multiplying. A reduction in flies can occur within 30 days of use.

## **ClariFly** Larvicide

Proprietary ingredient designed to control flies in show animal environments

## Cost-Effective

Control flies for less than alternative fly control options

## Low Feeding Rate

Low daily feed rate needed to control flies

## Safely Control Flies

Safe ingredients; backed by proven technology to provide fly control year after year

## Reduces Irritation

Purina® High Octane® Fly Control Supplement with ClariFly® works as a feed-through supplement, passing through the animal's digestive system and into the manure, where flies lay their eggs. ClariFly® prevents house flies, stable flies, face flies and horn flies from developing in and emerging from the manure – ultimately, interrupting the flies' life cycle.

Reduces irritation by flies in animal housing areas, at a lower cost than alternative fly control options. High Octane® Fly Control Supplement with ClariFly® was designed to limit stress in animals, which can potentially affect growth and production.

Develop a more comfortable environment for you and your animals to help them achieve greatness.

## Interrupt the Fly Life Cycle

**1** ClariFly® Larvicide is ingested via feed which the animal disperses via its manure. Start feeding 30 days before flies appear (typically when temperatures consistently reach 50°F)

**2** Female flies lay eggs in fresh manure or other organic waste.

**4** ClariFly® Larvicide inhibits the development of a functioning exoskeleton during molting to cause larval death before the pupal stage.

**3** Eggs will hatch into larvae that will feed and attempt to undergo 2 larval instars. ClariFly® Larvicide breaks the life cycle of flies developing in treated manure by not allowing the larvae to successfully molt from one instar to the next.

## Feeding Recommendations

Bodyweight (lb)	Swine		Sheep & Goats		Cattle	
	oz/day	Tbsp/day	oz/day	Tbsp/day	oz/day	Tbsp/day
Up to 50	0.4	1 ¾	0.8	3 ½		
51-100	0.8	3 ½	1.6	6 ½		
101-125	1.5	6 ¼	2.4	10		
126-150	3.0	12 ½	2.4	10		
151-200	3.0	12 ½	3.2	13 ¼		
201-250	3.0	12 ½	4.0	16 ½	1.0	4
251-300	4.5	18 ½			2.0	8 ¼
301-375	4.5	18 ½			3.0	12 ¼
376-500	6.0	24 ¾			3.0	12 ¼
501-750					4.0	16 ½
751-1000					5.0	20 ¾
1250-1500					6.0	24 ¾

Feed as part of a comprehensive fly control program. Best when initiated before the flies are active (i.e. consistent temperature above 60 degrees). Product may take up to 21 days.
